

## Simulated humeral avulsion of the glenohumeral ligaments: A new instability model

Last Updated Wednesday, 10 January 2007

Journal of Shoulder and Elbow Surgery

Nicole Pouliart MD, PhD, et al. - Humeral avulsion of the glenohumeral ligaments (HAGL) is an infrequent cause of shoulder instability...Extensive capsuloligamentous lesions on the humeral side seem to be required before dislocation can occur. This may be a factor explaining the relative paucity of HAGL in clinical series
