

## A case of elbow hyperextension leading to complete brachial artery rupture

Last Updated Wednesday, 28 March 2007

BMC Emergency Medicine

Deva S Jeyaretna., et al. To our knowledge there are no cases in the literature of traumatic vascular injury of the brachial artery by elbow hyperextension without elbow dislocation based on either clinical or radiological evidence...Conclusion: We advocate prompt clinical assessment by orthopaedic and vascular teams and early surgical exploration and repair
