

Aetiology and management of work-related upper extremity disorders

Last Updated Wednesday, 28 March 2007

Best Practice & Research: Clinical Rheumatology

J.B. Staal MSc, PhD, et al. - Work-related upper extremity disorders are a major cause for complaints and disability in worker populations. They may consist of a range of symptoms in the upper extremity, either clearly localised or more widespread, and are usually preceded or affected by exposure to physical activities and/or postures at work
