

## Minimally Invasive Knee Surgery

Last Updated Sunday, 09 July 2006

At 5 p.m.(EDT) on April 29, while the world watches on the Internet, a patient whose knee has been seriously damaged by osteoarthritis will undergo a newly developed procedure designed to restore maximum range of motion with minimal discomfort and recovery time. Gary G. Poehling, M.D., chair of orthopaedic surgery at Wake Forest University Baptist Medical Center, will perform the procedure. CME credit is available. [View Webcast](#)
