

## Mini-Incision Total Knee Replacement

Last Updated Saturday, 08 July 2006

A new advanced technique for Total Knee Replacement(TKR) will be showcased in a live broadcast on October 28, 2003 at 5 pm EST from Mercy Hospital in Miami. Because of its minimally invasive nature this procedure's recovery time has been reduced to 50% of the recovery associated with a conventional knee replacement procedure. Cutting into the muscle is minimal, and there is less blood loss, pain and fewer complications. The mini-incision TKR allows patients to substantially improve their quality of life by eliminating pain, regaining more mobility and improved range of motion. [Read more....](#)
