

## Course and Predicting Factors of Lower-Extremity Injuries After Running a Marathon

Last Updated Wednesday, 28 March 2007

Clinical Journal of Sport Medicine

van Middelkoop, et al. - Conclusions: One quarter of the runners had persistent complaints of their marathon-related running injury at 3 month follow-up. However, the clinical and social consequences of the injuries seem to be relatively mild. Nonmusculoskeletal comorbidities at baseline are related to poor recovery, whereas recovery is also location specific
