

Surgical Strategy for Cervical Myelopathy due to Ossification of the Posterior Longitudinal...

Last Updated Wednesday, 28 March 2007

Spine

Iwasaki, Motoki MD, PhD, et al. - Conclusions: Laminoplasty is effective and safe for most patients with occupying ratio of OPLL less than 60% and plateau-shaped ossification. However, neurologic outcome of laminoplasty for cervical OPLL was poor or fair in patients with occupying ratio greater than 60% and/or hill-shaped ossification
