

Treatment of knee pain in older adults in primary care: development of an evidence-based model of...

Last Updated Wednesday, 28 March 2007

Rheumatology

M. Porcheret, et al. - Conclusions: Previous evidence-based guidelines for the treatment of knee problems have been developed in secondary care. A systematic search for recommended interventions, and a consensus exercise, has now enabled an evidence-based and practical model of care for knee pain in older adults to be developed for use in primary care
