

Molecular Biology and Economic Development

Last Updated Thursday, 29 March 2007

Dr. David Poulsen is the Director of the Molecular Medicine Laboratory, a 1200 sq ft laboratory located on the St Patrick Hospital and Health Sciences Center campus. As the core research facility of the Montana Neuroscience Institute, the primary purpose of the lab is the investigation of animal models and the establishment of pre-clinical data in the support of the phase-I clinical trials. Dr. Poulsen is actively engaged in technology transfer, creating economic development opportunities in western Montana from biomedical research and development of new innovative products. We discuss the progress so far in this area and the future potential for biomedical industry in Missoula.

Dave Poulsen, PhD
