

Total Hip Arthroplasty Accolade Hip System

Last Updated Sunday, 09 July 2006

On Friday, September 16th from 2:00 p.m. to 3:00 p.m. EDT (1:00 p.m. CDT) Stryker Orthopaedics will present a live Webcast of a Total Hip Arthroplasty featuring the Accolade® Hip System with New Expanded Size Options direct from the Surgical Decisions and Advancements Meeting in Chicago.

The Webcast will provide an opportunity to gain a practical understanding of how the Accolade Hip System provides a balance of improved range of motion and enhanced patient quality of life. The procedure will show how the standard and extended offset options allow the surgeon to enhance soft tissue tensioning without significantly affecting leg length. The goal is to enhance patient quality of life by improving joint stability and range of motion.

The total hip replacement will be performed by William J. Hozack, M.D., from Thomas Jefferson University Hospital, Philadelphia, PA. Arthur L. Malkani, M.D. will moderate the procedure from the Surgical Decisions and Advancements Meeting in Chicago.
