

SafeScratch Offers Safe Alternative for Cast Wearers

Last Updated Wednesday, 25 June 2008

For anyone that has ever had a cast, you know how unpleasant the itching is! In desperation, we've put lots of different things down our casts to try to get relief, but now there is a safe alternative - SafeScratch.

New Product, SafeScratch™, Provides Relief For Cast Wearers

For any person that has ever had to wear a cast, one thing that plagues recovery is the intense itching cast wearers suffer from. After breaking his leg, Dick Witham, Founder of Motion Dynamics, was suffering from itchy skin under his cast, but coat hangers, pens & knitting needles didn't do the trick. Since Motion Dynamics manufactures custom springs, coils & wire forms for the medical, electronics and aerospace industries, Dick had the right tools at hand and worked with a tooling designer to develop a prototype. Relief was instantaneous and SafeScratch™ was born! The patented design of coiled stainless steel material and a uniquely shaped tip are flexible yet rigid enough to provide immediate relief. At 18" in length, the non-breakable and non-abrasive material can reach almost any itch. Plus, SafeScratch™ has a finger ring handle so that patients can't lose it in the cast. Physicians often discourage patients from putting anything inside a cast to relieve itching, but one would be hard-pressed to find a patient that didn't stick something down their cast to scratch their itch. Patients often resort to dangerous alternatives like coat hangers, rulers, pens and countless other items that could potentially damage the skin or get caught inside the gauze of the cast. SafeScratch™ offers a safe alternative for patients looking for relief.

SafeScratch™ is available at a retail list price of \$12.95 each and is also available for wholesale purchases. For more information please visit: www.safescratch.com.
